

Circularity report : OUTERWEAR

The jacket's shell is 100% Ventile cotton, which gives it a strong sustainability baseline simply by being a natural fibre, it's biodegradable and doesn't shed microplastics the way synthetic technical fabrics do. Ventile's own sustainability case leans on its use of natural fibres, with it being made from organic cotton. The trims are less strong: standard YKK zips have no recycled content, and the same goes for the thread, regular Gütermann Sew-All is virgin polyester (Oeko-Tex certified, but not recycled).
